Senri Ethnological Studies

Senri Ethnological Studies is an occasional series published by the National Museum of Ethnology. The volumes present in-depth anthropological, ethnological and related studies written by the Museum staff, research associates, and visiting scholars.

I. Peter J. Matthews

Preface

In this volume, I introduce an integrated, ethnobotanical approach to understanding the history of a crop that is possibly one of the oldest cultivated food plants known to humankind. Botanical, ecological, genetic, and ethnographic approaches have been combined in order to investigate the history of taro, *Colocasia esculenta* (L.) Schott. It is only through such an integrated approach that certain key questions can be addressed.

On the Trail of Taro reproduces a range of previous work that has been inaccessible and scattered, though foundational for exploring the history of this crop. In Part 1, the first chapter (newly written), introduces the subject, approach, and my own first steps on the trail of taro. It is followed by two short notes (Matthews 1982a, b) published as the fieldwork began in New Zealand. Parts 2 and 3 reproduce my MSc thesis (Matthews 1984) and PhD thesis (Matthews 1990) respectively. Each has been edited for errors, annotated with footnotes, and partly reorganised in order to provide a more readable sequence. All appendices have been combined into one section, all references have been combined into a single bibliography, and a comprehensive index has been added at the end. The compilation thus covers the years 1982–1990, includes herbarium data gathered during a year of study in Germany (1985), and records initial explorations in New Zealand, Australia, and Papua New Guinea. Although some of the laboratory methods reported are now obsolete, the need to integrate natural and social science approaches through fieldwork, laboratory work, archival research, and literature study is still very current, perhaps more so than ever. Basic historical understanding of useful plants may help to reduce dependence on the dangerously small number of crop species that now support the global food system. To conclude the volume (Part 4), I review recent research and consider future directions for the study, uses, and development of taro.

The target audience for this volume includes students and researchers in the agricultural, biological, and social sciences, and anyone concerned with human relationships with plants, the origins of food, and crop development. The trail of taro is what first brought me to Japan in 1990, a country with a rich history of taro cultivation, research, and utilisation. Since 1990, and while employed at the National Museum of Ethnology, Osaka (from 1996), I have conducted further fieldwork in Australia, Cook Islands, Cyprus, Egypt, Greece, Hawaii, Indonesia, Italy, Japan, Myanmar, New Zealand, Papua New Guinea, the Philippines, Taiwan, and Vietnam.

Every garden and every trail is a small monument to human intentions to survive and prosper, to explore and return home. Even as gardens and the trails that lead to them come and go, taro has persisted in pockets of opportunity provided by nature and by human imagination, memory, and neglect. This volume is an invitation to step into the trail of taro, and explore the remarkable history of a plant carried by countless ancestors, in their travels near and far, over thousands of years.

PETER J. MATTHEWS

25TH OCTOBER 2013

Acknowledgements

Part 1

The New Zealand Archaeological Association (NZAA) kindly gave permission for reproduction of the notes shown in Chapters Two and Three. Regarding the latter (Matthews 1982b), I thank Doug Sutton for arrangements and Jane Connor for field assistance. For their advice and generosity, thanks also to Hera Motu (Department of Maori Affairs, Kaikohe), Sydia Marsh (Waimate North), and the women at the Ohaeawai Cultural and Community Centre (Huatahi Kauwhata).

Part 2 (MSc 1984, University of Auckland)

I am extremely grateful to my supervisor P. H. Lovell for his advice and tolerance, and to J. A. Considine for extra encouragement. I also thank J. Keeling for technical training and G. Grayston for the use of darkroom facilities. To D. E. Yen, D. J. Coates, and P. M. Gaffey of the Australian National University (ANU), I express gratitude for discussions and assistance with the cytological investigation (during a summer visit sponsored by the ANU). For much continued encouragement I thank people in the Department of Anthropology, where the project began. I also wish to thank my correspondents, and all informants who assisted in this reconnaissance with knowledge, refreshments, or a pointing finger. To my volunteer field assistants I owe much for moral encouragement and great patience: J. Connor, P. Anderson, R. Marsh, and C. Fredrickson. Thanks also to M. Ford for his helpful advice and professional aid as computer operator, and to C. Hughes for typing and an affinity for tables. Financial assistance for fieldwork was kindly provided by S. Bulmer, Regional Officer of the New Zealand Historic Places Trust, and by the Royal Society of New Zealand with provision from the Mappin Fund. The Australian National University generously made possible a visit to the Department of Prehistory at the Research School of Pacific Studies (RSPacS), Canberra.

Part 3 (PhD 1990, Australian National University)

For supervision, encouragement, and criticism I thank: D. E. Yen and J. Golson, Department of Prehistory, RSPacS, ANU; D. Shaw, D. J. Coates, M. L. Arnold, Population Genetics Laboratory, Research School of Biological Sciences, ANU; and R. Appels, Department of Plant Industries, Commonwealth Scientific and Industrial Research Organisation (CSIRO), Canberra. For lessons and moral support in the laboratory, thanks to M. L. Arnold, D. Colgan, N. Contreras, K. Koishi, and A. Marchant, Research School of Biological Sciences (RSBS), ANU; R. Appels, CSIRO; B. Koller, European Molecular Biology, Laboratories, Heidelberg; Y. Ogihara and A. R. Subramanian, Max Planck Institut für Molekulare Genetik, Berlin. For invaluable field assistance: P. Lea, Department of Agriculture, Lae Technical University; M. Arura, Bubia

Agricultural Research Centre, Lae; K. Thiele, Australia; R. Hinxman, N. Horsfall, B. Jago, S. Mostachetti, V. Scarth-Johnson, and A. Urvine, Queensland. Financial and institutional support to study in Germany and visit various European herbaria were kindly provided by: the German Academic Exchange Service, Bonn; P. Müller, Institut für Biogeographie, Universität des Saarlandes, Saarbrücken, and the Max Planck Institut für Molekulare Genetik (1984–1985). T. Kawahara, Plant Germplasm Institute, Kyoto University, kindly provided samples of taro from Japan and Nepal. Study and fieldwork in Australia and Papua New Guinea were supported by the Research School of Pacific Studies and Biological Sciences, ANU (1985–1990). For institutional support in Papua New Guinea I thank the Department of Primary Industries (1985). Permission for fieldwork in national parks was given by the Queensland National Parks and Wildlife Service. For their patience and care with the taro collections, special thanks to staff at the Australian Government Quarantine Station, Canberra, the Australian National Botanic Gardens, Canberra, and the Plant Maintenance Group at RSBS, ANU. Thanks also to the illustrators and photographers at RSBS. P. Wilkinson (technical officer) at RSBS; and G. Braun (organisation), D. Markovic (photography), W. Mumford (illustrations), and L. Thompson (typing), at the Department of Prehistory, RSPacS, helped from start to finish.

Part 4

Here I review work supported by many different institutions and people over the last twenty-three years. In particular, I wish to mention M. Hirai (National Institute for Vegetables, Ornamental Plants and Tea, Ano, 1990), R. Terauchi and S. Kawano (Department of Botany, Kyoto University, 1992), Y. Nishida (Niigata Prefectural History Museum, 2004–2008), Y. Sato (Research Institute for Humanity and Nature, 2004–2010), R. Ishikawa (Hirosaki University, 2010–2011), K. Watanabe (Gene Research Center, University of Tsukuba, 2003–2013), and P. J. Lockhart et al. (Massey University). Recent fieldwork has been supported through institutional agreements between the National Museum of Ethnology, the National Museum of the Philippines, Manila, and the Institute of Ecology and Biological Resources, Hanoi, Vietnam. This work has also been supported in part by the Japan Society for the Promotion of Science (2011–2013, JSPS KAKENHI Grant No. 23405004).

Present volume

For institutional and practical support, I thank the National Museum of Ethnology, and especially the staff of our Publications Office, my research assistant E. Tabuchi, and the internal reviewer. Bioersity International, Italy, gave permission for reproduction of the article shown in Appendix 22. Copyediting assistance was provided by J. Martin and E. Humphrey (USA), S. Bradford and G. Williams (NZ), and M. Smith (Japan). M. Coe (Australia) prepared the index.

23. Two taros from Japan: *Ishikawa-wase* and *Tonoimo* 400

INDEX 405

List of Figures

Chapter Two

- 2.1 Leaf shapes of aroids common in New Zealand
- 2.2 *C. esculenta* (taro)

Chapter Three

- 3.1 Distribution of taro in the Bay of Islands
- 3.2 Acutely lobed, peltate leaves of stoloniferous form (later identified as var. GP)
- 3.3 Broadly lobed leaves of form that produces cormels (later identified as var. RR)
- 3.4 Whangerei plant (later identified as AKL 34)
- 3.5 Taro at Ngawha, May 1982 (later identified as var. GP)

Chapter Five

- 5.1 Morphology of *C. esculenta*
- 5.2 Growth habits of New Zealand variants of *C. esculenta*
- 5.3 Growth habits of New Zealand variants of *C. esculenta*, in the field
- 5.4 Leaf-blade outlines, each from a single leaf
- 5.5 Flowering of *C. esculenta* variant RR, in New Zealand
- 5.6 Flowering of *C. esculenta* variant GP, in New Zealand
- 5.7 Leaf blades of *C. esculenta* with symptoms suggesting virus infection
- 5.8 Leaf blades of three New Zealand variants of *C. esculenta*
- 5.9 Canonical discriminant analysis of leaf shape in *C. esculenta*
- 5.10 Two kinds of inflorescence in *C. esculenta*

Chapter Six

- 6.1 *C. esculenta* root-tip metaphase chromosomes from single cells
- 6.2 Tentative karyotypes of five variants of New Zealand taro

Chapter Seven

- 7.1 *C. esculenta* sites, North Island, New Zealand
- 7.2 Further sites with *C. esculenta*, North Island, New Zealand
- 7.3 New Zealand locations mentioned in text, and areas of intensive fieldwork (rectangles)
- 7.4 *C. esculenta* in Northland: observed distributions of variants RR, GR and GP
- 7.5 *C. esculenta* in or beside the Hauraki Gulf, Auckland
- 7.6 *C. esculenta* around East Cape
- 7.7 Distribution of taro (variant RR) on Motukawauni, Cavalli Islands, North Auckland
- 7.8 Distribution of taro (variant RR) on Mahinepua, North Auckland
- 7.9 The settlement Torere, East Cape, in September, 1948

Chapter Nine

- 9.1 Australian specimens of *C. esculenta* collected by Joseph Banks in 1770
- 9.2 Distribution of *C. esculenta* (Africa to America) and other *Colocasia* species in Asia
- 9.3 Inflorescences, fruit, and seeds of wild taro
- 9.4 Structure and function of the *Nor*-locus ribosomal DNA repeat
- 9.5 Sequence divergence between rDNAs of *Triticum* species

Chapter Ten

- 10.1 *C. esculenta* (L.) Schott from wild, tropical rainforest habitat
- 10.2 *C. esculenta* var. *fontanesii*
- 10.3 *C. gigantea*
- 10.4 *C. fallax*
- 10.5 *C. affinis* var. *jenningsii*
- 10.6 *Colocasia* sp. (*C. affinis* x *C. esculenta*?)
- 10.7 Characters for phenotype description of taro
- 10.8 Locations of stoloniferous wild taro in Morobe Province, Papua New Guinea
- 10.9 Wild taro, Morobe Province, Papua New Guinea
- 10.10 Wild taro photographed with alluvial mud at collection site, Rumu River, Morobe Province
- 10.11 General distribution of wild taro in Australia (1770 to 1989)
- 10.12 Wild taro in northeast Queensland (1987–1989)
- 10.13 Schematic outline for DNA analysis
- 10.14 Partial purification of ribosomal DNA (enrichment procedure)
- 10.15 Screening for transformed cells and detection of recombinant clones
- 10.16 Colony hybridisation with a wheat rDNA probe

Chapter Eleven

- 11.1 Sites of triploid taro varieties RR, GR, GP from the North Island, New Zealand, analysed with taro rDNA probes
- 11.2 Derivation of a chloroplast DNA probe
- 11.3 Derivation of mitochondrial DNA probes
- 11.4 Derivation of nuclear rDNA probes
- 11.5 DNA fragments from *C. esculenta*, *C. gigantea*, and *A. brisbanensis* (Cox I mitochondrial DNA probe)
- 11.6 DNA fragments from *C. esculenta*, *C. gigantea*, and *A. brisbanensis* (mitochondrial 18–5S rDNA probe)
- 11.7 DNA fragments from two varieties of *C. esculenta*
- 11.8 Taro DNA fragments detected with the nuclear rDNA, 18S gene probe
- 11.9 *Taq* I rDNA spacer fragments from New Zealand
- 11.10 *Rsa* I rDNA spacer and genic fragments from New Zealand
- 11.11 *Bam* HI rDNA fragments from New Zealand
- 11.12 Evolutionary scheme (serial endosymbiosis hypothesis) for plant eukaryotes

- 11.13 Alignment of *C. esculenta* and *Secale cereales* 5S rDNA repeat units
- 11.14 Dendrogram for species of *Colocasia* and *Alocasia*, based on restriction fragment patterns

Chapter Twelve

- 12.1 Mapping the position of the 2.8 kbp *Taq* I fragment from pCe34. 1
- 12.2 Restriction-site map for *Nor*-locus rDNA from taro variety AKL 34
- 12.3 Alignment of the taro rDNA restriction site map with maps for pea and wheat
- 12.4 Restriction site map for a variable segment in the large intergenic spacer region (AKL 34)
- 12.5 Taro rDNA probe from variety AKL 34 hybridised *in situ* to mitotic chromosomes
- 12.6 The rDNA repeat unit of *Lilium henryii*

Chapter Thirteen

- 13.1 *Bam* HI restriction sites in the rDNA genic regions of *C. esculenta* and other Colocasioideae
- 13.2 A diagnostic test for *C. esculenta* ribosomal DNA
- 13.3 Thermal melting point analysis of rDNA spacer sequences in *Colocasia* species
- 13.4 Thermal melting point analysis of rDNA spacer sequences in varieties of *C. esculenta*
- 13.5 The methylatable *Bam* HI site from the 18S rRNA gene of taro

Chapter Fourteen

- 14.1 Percentage frequencies of *Taq* I and *Hinf* I rDNA intergenic spacer fragments
- 14.2 Contrasting examples that illustrate rDNA length variation within and between plants
- 14.3 Locations of wild taro of the Jiyer phenotype recorded in Queensland, 1987–1988
- 14.4 Ribosomal DNA analysis of wild taro in Queensland, Australia
- 14.5 Ribosomal DNA in Australian wild taro: *Taq* I and *Hinf* I spacer fragments
- 14.6 Ribosomal DNA in wild and cultivated taro, Morobe Province, Papua New Guinea
- 14.7 Cultivated taro from eastern Polynesia: *Taq* I and *Hinf* I rDNA spacer fragments
- 14.8 Japanese taro: *Taq* I and *Rsa* I rDNA spacer fragments
- 14.9 Comparison of triploid taro varieties from New Zealand and Japan
- 14.10 Widely distributed rDNA classes
- 14.11 *C. esculenta* var. *fontanesii*: *Taq* I and *Hinf* I rDNA spacer fragments
- 14.12 Percentage frequencies of rDNA intergenic spacer fragments in different size classes
- 14.13 Wild taro in Australia: Hypothetical models relating possible dispersal processes in the past to outcomes
- 14.14 Historical model for taro illustrating the origins of an inverse relationship between phenotypic diversity and genotypic diversity
- 14.15 Diagram illustrating the distribution of rDNA repeat units on homologous chromosomes

- 14.16 The possible recent origins of *C. esculenta* var. *fontanesii* in Australia and New Zealand

Chapter Fifteen

- 15.1 *Colocasiomyia* on a spathe of wild taro in Morobe Province, Papua New Guinea
 15.2 Nymph (*Tarophagus*) from a leaf of wild taro, Moochoopa Falls, Bellenden Ker National Park, Northeast Queensland
 15.3 *Tarophagus* species in Southeast Asia and the Pacific
 15.4 The Carpentaria drainage basin showing maximum extent of Lake Carpentaria Basin
 15.5 Possible origins and dispersal of diploid taros that display different rDNA patterns, in Sahul
 15.6 Scheme for the production of triploid taro by aberrant vegetative reproduction
 15.7 Scheme for the production of triploid taro by aberrant sexual reproduction

Chapter Sixteen

- 16.1 The possible restricted natural range of taro and a scheme depicting a single area of origin for cultivated taro
 16.2 Climatic zones in Asia and the western Pacific
 16.3 The maximum possible natural range for taro in Asia and the Pacific, and a scheme depicting the possible multiple geographical origins of cultivated taro

Chapter Seventeen

- 17.1 Early and advanced symptoms of Taro Leaf Blight (TLB), and shade house for a taro breeding programme, Papua New Guinea
 17.2 Corms of different elite cultivars being prepared for a taste panel, Papua New Guinea

Chapter Eighteen

- 18.1 *C. gigantea* (Bl.) Hook f. in New Zealand and Vietnam
 18.2 Production and use of taro leaves as a vegetable
 18.3 Low-level production of taro using simple methods of protection, in naturally wet habitats
 18.4 Taro harvest in progress at Agios Georgos, Paphos District, Cyprus
 18.5 *C. formosana* Hayata on roadbank in Wulai district, northern Taiwan
 18.6 Consensus phylogenetic tree obtained after Wagner parsimony analysis of isozyme variation in taro
 18.7 Principle components analysis of isozyme variation (zymotypes) in 2081 cultivars from seven countries in Southeast Asia and Oceania
 18.8 *C. yunnanensis* Long and Cai, at approx. 2000 m above sea level, northern Vietnam

List of Tables

Chapter Five

- 5.1 Records of *C. esculenta* flowering in New Zealand
- 5.2 Floral morphology of *C. esculenta*
- 5.3 Canonical discriminant analysis of leaf shape in *C. esculenta*, New Zealand variants RR, GR and GP
- 5.4 Correlations between blade characters in *C. esculenta*

Chapter Seven

- 7.1 Occurrence of *C. esculenta* variants RR, GR, and GP in different site categories
- 7.2 Observed ranges of *C. esculenta* variants RR, GR, and GP

Chapter Ten

- 10.1 Summary of records for taro in Australia, 1770–1989

Chapter Eleven

- 11.1 DNA restriction fragments from *C. esculenta* and *C. gigantea*, detected by hybridisation with spinach chloroplast DNA probe (*Sal* I–6)
- 11.2 DNA restriction fragments from *C. esculenta* and *A. brisbanensis*, detected by hybridisation with the *Cox* I mitochondrial DNA probe from maize
- 11.3 DNA restriction fragments from *C. esculenta*, *C. gigantea*, and *A. brisbanensis*, detected by hybridisation with the maize mitochondrial 18–5S rDNA probe

Chapter Thirteen

- 13.1 Taxonomic and geographical distribution of the methylatable *Bam* HI site in the 18S rRNA gene
- 13.2 List of plants tested for thermal melting point analysis of rDNA spacer sequences in *C. esculenta*

Chapter Fourteen

- 14.1 Frequency distributions for rDNA spacer fragment size variants, detected after *Taq* I analysis of wild and cultivated taro from Asia, Papua New Guinea, Australia and the Pacific Islands
- 14.2 Frequency distributions for rDNA spacer fragment size variants, detected after *Hinf* I analysis of wild and cultivated taro from Asia, Papua New Guinea, Australia and the Pacific Islands
- 14.3 Estimates of rDNA spacer fragment sizes for twenty rDNA classes recognised for taro
- 14.4 General geographical distributions of rDNA classes identified in 86 samples of cultivated and wild taro
- 14.5 Classification of 44 samples of *C. esculenta* according to rDNA class and the

- distribution of anthocyanin pigments
- 14.6 Size frequency distributions for *Taq* I and *Hinf* I rDNA spacer fragments in diploids and triploids
- 14.7 Ribosomal DNA classes in diploids and triploids
- 14.8 Summary of DNA and phenotype observations for eight accessions of Japanese taro
- 14.9 Prescriptions for genotypic markers (rDNA complements) for investigating dispersal history

INDEX

Reader, please note: Since the major topic of this work is *Colocasia esculenta* (taro), entries have been kept to a minimum under this keyword.

Unless otherwise noted, main headings throughout the index refer to taro.

Page numbers followed by *n* indicate notes.

A

- Aboriginal people (Australia) 98, 214, 258, 377–380
- acridity 26, 247*n*, 257, 267, 364, 392–393, 399
- Africa 95, 99, 278, 280, 390
 Madagascar 183–186, 192–193, 210–211, 386
- agarose gel electrophoresis 131, 192
